

DeliveryIQ E-Commerce Delivery Performance & Delay Analysis

CEO Dashboard · Jan–Dec 2023 · 5,000 Orders

PREPARED BY SAITEJA JAKKULA

BUSINESS OPERATIONS & DELIVERY ANALYTICS

Made with GAMMA

Executive Summary

5,000 Orders Analyzed

Across India, Jan–Dec 2023

49.5% SLA Breach

Nearly 1 in 2 deliveries missed the 5-day SLA

3× Industry Benchmark

Delay rate vs. 15% industry standard

Systemic Issue

Not isolated to one region or courier

Core Finding: The delay crisis drives revenue loss, customer churn, brand trust decline, and reduced repeat purchases.

The Delivery Crisis

1 in 2 Orders Delayed
(49.5%) – 2,476 orders

₹18–21 Crores Annual Risk
– 40% less likely to reorder

13.6% Percentage Point
Performance Gap

North India (55.8%) – Delhi
& Lucknow are highest-risk

Key Problems Identified

- **2,476 orders** missed SLA — a 49.5% delay rate
- Estimated annual revenue risk: **₹18–21 Crores**
- Delayed customers are **40% less likely to reorder**
- India Post delay rate: **57.3%** vs. Ecom Express **43.7%**
- North India delay rate: **55.8%** — Delhi & Lucknow highest risk

Key Performance Indicators

5,000

Total Orders

2,476

Delayed Orders

49.5%

Delay Rate

4.67

Avg Delivery Days

₹125.6Cr

Total Revenue

₹25,113

Avg Order Value

Key Insight: Nearly **50% of revenue-generating orders** are exposed to delay-related customer dissatisfaction and cancellation risk.

Monthly Delay Trend Analysis

Critical Months

- **January:** 59.5% delay rate — highest peak
- **September:** 56.3% delay rate
- **July:** 53.8% delay rate

Insights

- Delay spikes align with demand surges
- Capacity planning is reactive, not predictive
- Warehousing and courier ops fail during peak periods

A **30% pre-seasonal capacity increase** could significantly reduce annual delayed orders.

Courier Performance Analysis

Key Findings

- **India Post** is the weakest-performing courier at 57.3%
- **Ecom Express** is the benchmark performer at 43.7%
- Performance gap of **13.6 percentage points**
- Current routing logic ignores courier performance quality

Strategic Concern

Cheaper couriers create hidden costs through refunds, complaints, churn, and lost CLTV.

Regional & Category Analysis

Regional Delay Rates

Key Observations

- **Every region** performs worse than the 15% industry benchmark
- North India leads at **55.8%**; West India at **42.9%**
- Delay rates are **consistent across categories** — indicating an infrastructure/process issue, not a product issue

High-Risk Category: Electronics orders require priority courier allocation, faster delivery handling, and premium routing logic.

Root Cause Analysis — 5 Why Framework

High SLA
Breaches

Courier
Inefficiency

No SLA
Penalties

Poor
Capacity
Planning

No Real-
Time
Monitoring

⊗ **Root Cause:** The organization operates **reactively** instead of proactively — discovering issues too late to prevent damage.

Strategic Recommendations

1

SLA Contract Reform

Introduce courier penalty clauses to reduce chronic underperformance

2

Smart Courier Routing

Route high-value orders to best-performing couriers to protect premium customers

3

Peak Season Capacity

Add 30% operational buffer during demand spikes

4

Real-Time SLA Monitoring

Implement rolling 7-day dashboard tracking

5

North India Audit

Focus on Delhi & Lucknow bottlenecks

6

Proactive Communication

Automated delay alerts + compensation vouchers

Expected Business Impact

Metric	Current	Target
Delay Rate	49.5%	~22%
Cancellation Rate	18%	~10%
Repeat Purchase Rate	Baseline	+15–20%
Revenue Protected	—	₹18–21 Cr

Final CEO Takeaway

Delivery performance is no longer just an operations KPI — it directly impacts **revenue, customer retention, brand trust, and long-term growth.**

Immediate Priority

Two actions alone can generate the fastest ROI:

1. **SLA Reform** — introduce courier penalty clauses
2. **Smart Courier Routing** — protect high-value orders
